Peru

Here I am, with Mariano Prado making a TOP SECRET alliance, because maybe someday it comes in handy, and help us. Also, I think this is a very clever strategy, and it can be an advance for our country Bolivia, to maybe some day end with Chile because they are being way to dependable and taking our saltpetre from Bolivian territory, then they start making their own business out of it! Even though I am adding taxes I really want to increase them because my country's' economical state has started going down way too much, sadly we have a treaty so I can't increase taxes. ## [Comments](#)

[Https...Federico\\_Errázuriz](#): So that was your plan? Wasn't it!? Betraying us after having an alliance between my country, and create a Huge new alliance between Peru, you will pay for this, I will declare war you know? You will regret this. Also, you Mariano! Don't you remember how many times we saved your country back then from those dirty Spaniards, and you decide just to be mean and end with us.

# BENJAMIN VICUÑA MACKENNA INTERVIEW

## WHICH CONTRIBUTION DID YOU DO IN CHILE?

*Some contributions I did in Chile was to remodel and improve Santiago and Cerro Santa Lucia's parks and frame of the Mapocho river, you can also add that I made a very important speech in the pacific war since we were having some lack of soldiers and army, this speech increased the amount of followers for the patria and for last, I was 20 years in the congress and Intendent of Santiago.*

## WHAT INSPIRED YOU TO ACHIEVE THAT CONTRIBUTION?

*When I went to Paris, I saw the structure of the city and it gave me inspiration to change Santiago and Cerro Santa Lucia's parks and frames near the Mapocho river, to be more like Paris. So, in my mind the plan I had for the improvements where more like in that city, so my objective was for those parts to look a little more like Paris.*

Mapocho river:

# ARTICLE ABOUT THE ATMOSPHERE

## Greenhouse effects impacts on Atmosphere

Have you ever heard about the atmosphere? I hope you have heard about it, otherwise the atmosphere is the main topic for today's article, it will be explaining of what this is made, its function and a normal phenomenon this sphere has.

Atmosphere comes from atoms=air, or in other words gases in earth like oxygen, carbon dioxide, Argon, and Nitrogen.

The Atmosphere is a thin layer of gases that surround our planet, this layer of gases allows different weather conditions.

It is divided in 5 zones: Troposphere-Stratosphere-Mesosphere-Thermosphere-Exosphere

The ozone layer is in the Stratosphere, and it protects us with the UV rays.

It is important because the Atmosphere helps to protect living organisms that live in earth from sun's UV rays without applying genetic damage like cancer to the skin. Also, because there is a normal phenomenon called Green House effect, that absorbs the heat to have an average temperature to live in earth.

An effect of human activity is the Greenhouse effect, as I explained it is a normal phenomenon that absorbs atmosphere heat allowing the earth to have an average temperature necessary for living conditions, Human acts produce the "Greenhouse gases." Gases accumulate in the atmosphere retaining more heat, the average temperature increases changing the temperature, climate and making glaciers melt. This damages the Atmosphere by warming this sphere way more, affecting our earth.

Finally, we should start taking actions to prevent this, because of global warming as an effect from Greenhouse Gases, some ways to prevent this would be to not using so much fossil oil because when you burn this, creating heat or carbon dioxide the Atmosphere gets contaminated retaining way more heat than it should, making Glaciers melt and climate changes. And, by maintaining the normal acts that contaminate the Atmosphere by that the use of cars, maintain that use not in excess because it will contaminate way more our home.

In this picture you can identify the thin layer of gases that surrounds our planet, or in other words the Atmosphere.

# MY FINAL REFLECTION

## WHAT CHANGES MAKE

## OUR MIX?

What changes make our mix, you can relate it with the Pacific war, civil war and the territory improvement because those changes made Chile how it is now a days, like for example a thin country but instead it's not small its large. Or with the question social, in which people had to apply changes in their daily lives to continue on, one example might be the crowded houses they had to adapt to continue living on that city, since it was not on conditions to recive so many people.

## WHAT HELPED YOU UNDERSTAND BETTER THE PROJECT?

To lead me to understand better what we learned in clases the expert visit helped a lot, there the expert shared their thoughts and knowlege of a specific topic. Also it helped me a lot the Horizon's model to understand better the structure of the soil layers. And for last the reflections helped me a lot because you compleated and shared your thoughts in a autonomous way.
