

BACK IN TIME

WHAT CHANGES MAKE OUR MIX?

soldierCH79

Iquique, Perú

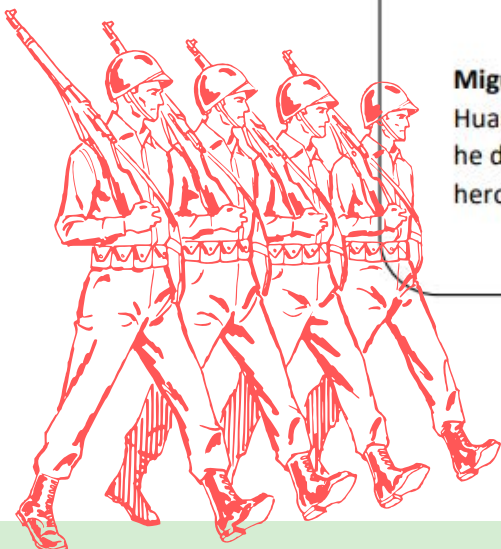

soldierCH79 Right here at the Peruvian port in Iquique the Esmeralda is sinking and Arturo Prat jumped to the enemy's ship, the Huascar, giving an example to the members of the crew. Prat was very **clever** and knew that the only way of making damage to the Peruvians was by jumping to the Huascar and attacking them man to man. Sadly, he did not last much longer, he was shot at the back of his head and died. Even though he did not survive he is considered a hero on Chile.

#tremendousjump #goodlucknexttimechile #hugehero

May21st, 1879

MiguelGrau Arturo Prat was a very brave man. He died here on the Huascar. I tried to save him, but I failed. I have Prat a lot of respect, he died on this war and know he is remembered as an **awesome** hero.

Does it hurt?

The geosphere is especially important for all the living thing on the planet Earth. We damage a lot this sphere every day and that can have serious consequences.

The Geosphere is made of all the non-living solid parts of Earth and is divided in different layers one of them is called lithosphere and is the one that we live on. This sphere is particularly important because is the base of this planet and is where most of the living things live on. Every time you see a rock, a mountain even the small grains of sand in the beach and in the desert, you are looking at the Geosphere.

Soil compaction is when soil gets compacted when the humans and animals walk over it, destroying holes that worked as home for animals that produce soil and making the soil lose its fertility. Soil

compaction affects the Geosphere because it compacts the soil and when the soil is compact it loses the capacity of growing plants, also animals and microorganisms like worms that produce soil do not have a home anymore

and they are no longer able to produce soil which is awful. Also, as the soil loses its fertility and we would not be able to produce crops or grow anything from it.

In conclusion is important to know about all the damage that we cause to this sphere and how can we prevent the consequences that we have to worry about if we continue. I invite you to reduce the amount of people and animals in small places to avoid the soil compaction.

José Victorino Lastarria

Which were the main contributions that you did?

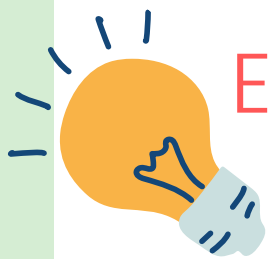

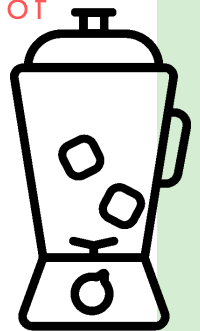

Some of my main cultural contributions are that I made important changes to the constitution of 1833 and another of my contributions is that I tried to eliminate every object related with monarchy.

Why did you want to eliminate every single object related with monarchy?

I wanted to eliminate every object related with monarchy because I wanted that Chile has its own culture and for that I must destroy all the things related with the Spanish culture.

What changes make our mix?

Chile was made by different events in history one of them is the Pacific War. This war changed a lot our country many people died we gained land at the north and lost territories in the south. After the war was the saltpeter boom producing many people from the south to come to the north searching for job opportunities. Big cities were not prepared to receive this huge amount of people causing something called social question. Social question in Chile was that people that came from the south could not afford a house for their own so they had to live in conventillos with other families. During this period of time life quality depended in how wealthy you were. People was most of the time overcrowded causing diseases and soil compaction. Soil compaction is one of the effects of humans on the Earth more specifically to the lithosphere, one of the layers of the Geo-sphere one of the four spheres of the earth.

Experiences that helped me learn

Some experiences that really helped me with my learning are the ones that I had to create like the tpa of the model I had to think of a way to represent the Earth horizons which made me remember each one of them and what were they made of easily. Also something that helped me a lot was writing the article because it made me focus on each word that I wrote making me understand and remember all that we learned about the Geo-sphere and how much damage we cause to this planet.
